Patent No. 6583275

GENERAL INFORMATION:

APPLICANT: Lynn A Doucette-Stamm and David Bush

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: BY ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          656477 AATTAGAAGAAAGAGAAAGAGAAGAAATTGAGGATATCAAAGACTCAGATACAAAAT 656418
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 656358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               461

```
The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, H1 and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovitus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin
                                                                                                                                                                                                                                                                                                                                                                                Human; dystrophin minigene; muscular; gene therapy; utrophin; s

                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                           g
                                               The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene in operable linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1656 GAGCTATGCCTACACACACAGGCTGCTTATGTCACCACCTCTGACCCTACACGGAGCCCATT 1715
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like respeats, and contains no more than n spectrin-like respeats, where n is an even number between 4-24, or a mucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynuclectide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a mini-dystrophin sequence of the

phin minigene for treating Duchenne or Becker muscular comprises an N-terminal domain, s. H1 and H4 domains and a cysteine rich domain of a dystrophin New dystrophin m dystrophy compri rod repeats, Hl

Example 1; Page 50-51; 71pp; English

The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal or modified N-terminal domains and cysteine-rich domains of dystrophin or utrophin gene, H1 and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operable linkage with an expression element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating buchenne muscular dystrophy (BMD) and Becker muscular dystrophy (BMD) in amamalian subject. The present sequence is human dystrophin minigene deltas331 contraling nucleotides 1-1341 (N-terminus, hinge H1 and rod R1), 8059-10227 (rode R22, R23 and R24, hinge H4 and CR domain) and 11047-11058 (dystrophin last 3 amino acids)

```

The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, H1 and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV)

ntion relates to an isolated nucleotide sequence encoding igene. The minigene comprises N-terminal or modified N-verme to the modified N-verme and the comprises N-terminal or modified N-verme and the comprise of a spectrin gene, H1 and H4 and H4 generated domains of dystrophin or utrophin gene. The chartes to a recombinant adeno-associated virus (AAV) ophin minigene operably linked to an expression trophin minigene in operable linkage with an expression tra recombinant adeano-associated virus or retrovirus is in a recombinant dystrophy (DWD) and Becker muscular in a mammalian subject. The present sequence is human ene deltasis4 containing nucleotides 1-1668 (N-terminus, SR, R2), 8059-10227 (rods R2, R3 and R24, hinge H4 and 11047-11058 (dystrophin last 3 amino acids)

                                                                         TACGGGACGAACAGGGATCCGTGTCCTGTCTTTTAAAACTGGCATCATTTCCCTGTG 1992
                                                                                                                                                                                                              The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to an expression control element. The dystrophin minigene in operable linkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is useful for treating Duchenne muscular dystrophy (DMD) and Becker muscular dystrophy (BMD) in a mammalian subject. The present sequence is AAV vector plasmid construct containing human dystrophin minigenes, a muscle creatine kinase (MCK) promoter and a small polyA signal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, rod repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; dystrophin minigene; muscular; gene therapy; utrophin; spectrin; adeno-associated virus; AAV; Duchenne muscular dystrophy; DMD; BMD; Becker muscular dystrophy; ds.

New dystrophin minigene for treating Duchenne or Becker muscular dystrophy comprises an N-terminal domain or modified N-terminal domain, cad repeats, H1 and H4 domains and a cysteine rich domain of a dystrophin

Example 1; Page 70-71; 71pp; English.

The present invention relates to an isolated nucleotide sequence encoding a dystrophin minigene. The minigene comprises N-terminal or modified N-terminal domains, rod repeats, utrophin or a spectrin gene, HI and H4 domains and cysteine-rich domains of dystrophin or utrophin genes. The invention also relates to a recombinant adeno-associated virus (AAV) comprising dystrophin minigene operably linked to a expression control element. The dystrophin minigene in operable inkage with an expression control element, in a recombinant adeno-associated virus or retrovirus is

88888	useful for treating Duchenne muscular dystrophy (BMD) in a mammalian subject vector plasmid construct containing hu creatine kinase (MCK) enhancer, a cytosmall polyA signal sequence	dystrophy (DMD) and Becker muscular . The present sequence is AAV man dystrophin minigenes, a muscle megalovirus (CMV) promoter and a

The invention describes a composition comprising a mini-dystrophin peptide comprising a gpectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats, where n is an even number between 4-24, or a nucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a mini-dystrophin sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TAATATTCTACAATTGGAAGTAAGCTGATTGGAACAGGAAAATTATCAGAAGATGAAGA

                                                                                                                                                                                                                                                                                                                            The invention describes a composition comprising a mini-dystrophin peptide comprising a spectrin-like repeat domain, where the domain comprises n spectrin-like repeats, and contains no more than n spectrin-like repeats, where n is an even number between 4-24, or a mucleic acid encoding a mini-dystrophin peptide. The mini-dystrophin peptide or the polynucleotide encoding it is useful as a medicament, for preparing a drug for therapeutic application and in the preparation of a composition for treatment of muscle disease, e.g. Duchenne's muscular dystrophy (DMD). This sequence represents a mini-dystrophin sequence of the
